Consider Upgrading to VPS for Better Performance

[My Account](#)

Hey Milan,

Our monitoring systems show that one (or some) of your user accounts may be making your web hosting account operate inefficiently. We noticed you've frequently hit the memory limits of your shared hosting plan over the last couple weeks. When this happens, our system automatically stops web processes which could be negatively impacting your server's performance. This means your visitors may see errors or be unable to access your website at all for brief periods of time.

These are the FTP/shell users on your account, alongside the number of times they've hit their memory limits:

sindark: 1471

Here's what you can do:

1. Leave Everything As-Is

If you're satisfied with your current website performance, then we are too! You can leave things unchanged and our systems will continue stopping processes as your site runs into limits.

2. Optimize Your Website

You may be able to improve your website's performance so that it runs more efficiently. We've put a lot of effort into building some really [comprehensive documentation](#) that will help walk you through the process of optimizing your site. We've also got some [WordPress-specific optimization](#)

[instructions](#) that you may find helpful. Remember, you're not in this alone - we're here to help!

3. Upgrade to VPS – *THE EASIEST OPTION*

If optimization efforts don't get the results you want – or if you just don't have time to go through that process – consider [upgrading to a fully-managed Virtual Private Server](#).

Move to VPS

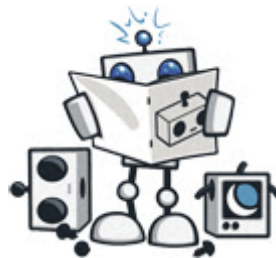

*Upgrade Today and **Get One Month FREE****

VPS is just as easy to use as your current hosting, and costs only a fraction more than Shared Hosting. The difference is you'll get instant access to more memory, guaranteed server resources, and you'll be virtually "walled off" from the actions of other customers. You'll even be able to continue hosting an unlimited number of websites at no extra cost!

Upgrade risk-free with just a click! If you don't love the immediate performance improvements, we'll happily move you back.
