NASA Global Climate Change News: April 2016

NASA's Climate Change Newsletter <climate-feedback@jpl.nasa.gov>
To: milan@sindark.com

7 April 2016 at 13:31

TOP STORIES >

- **Update: Carbon dioxide concentration**
Average atmosphere at about 403 ppm
- **Update: Sea level change**
Ocean rising at 3.42 mm per year
- **Blog: Sorrow and excitement**
Watching global warming in real-time from the air
- **Detecting forest fungi from space**
How will climate change alter forest habitats?
- **Record low wintertime maximum**
2016 Arctic sea ice extent reacts to warmer temps
- **Let's talk coral reefs**
Campaign to map world's stressed undersea rainforests
- **Humans are melting Greenland**
Mission to pave way for improved sea level estimates
- **Globetrotting for science**
Scientists go into the field for climate change
- **Greenhouse gas world tour**
Ambitious airborne study in first deployment
- **Climate change shifts wine grape harvests**
France and Switzerland should take heed
- **Jason-3 maps the sea**
Satellite makes its first complete ocean surface picture

About Us

NASA's Global Climate Change website is produced by the Earth Science Communications Team at NASA's Jet Propulsion Laboratory / California Institute of Technology. To learn more, visit our website at <http://climate.nasa.gov/>.
